AUGUST

National Immunization Awareness Month

People with diabetes are at higher risk for serious health complications from vaccine-preventable diseases. Even if well managed, diabetes can make it harder for your immune system to fight infections.

Ensure your and your family's health are protected by being caught up on routine vaccinations.

Talk with your doctor about what vaccines are right for you.

If you are living with pre-diabetes or any type of diabetes, enroll in the Good Health Gateway® Diabetes Care Rewards Program today to manage your diabetes well and to earn \$0 copays on diabetes medications and supplies.

Enroll Today!
