

# Your Checklist to NET ZERO

**TODAY**

## GET STARTED

Schedule a free home energy assessment, which includes a refit of water-saving shower heads and faucets, LED light bulbs, advanced power strips, and programmable thermostats, all at no cost to homeowners or renters!

**202?**

## WEATHERIZE A SEASON AHEAD

Make your home more adaptable to extreme temperatures by updating your insulation, resealing your windows and doors, and planting trees to provide your property with shade.

## OFFSET WASTE AND EMISSIONS

While working up to the more expensive changes, reduce your carbon footprint in your day-to-day lifestyle by using public transportation, adopting a low-meat diet, composting your food waste, and replacing your lawn with a garden or meadow.

## REPLACE APPLIANCES

As your appliances age, consider replacing them with more energy-efficient technologies, such as induction stovetops or heat pump dryers.

**2035**

## SWITCH TO ELECTRIC VEHICLES

Massachusetts is to ban the purchase of new gas-powered vehicles in 2035. As your vehicle ages, look into hybrid and electric vehicles coming onto the market that will suit your needs!

## UPDATE HEATING & COOLING

Try out switching from oil heat to a heat pump or a solar water heater. A heat pump can replace your entire HVAC system altogether!

**2050**

## GO SOLAR

Producing your own energy is the single most important thing you can do to offset your remaining emissions and go 100% carbon neutral. Join community solar projects, or install your own solar arrays!
